EQUALIZE NYC

Cracking the "Black Box" of Automated Government through Digital Due Process

2026 STRATEGIC FRAMEWORK

Transparency | Due Process

JANE: Jackie, Alex, Nyosha and Eric

THE CRISIS

Invisible Algorithms making Life-Altering Decisions for millions of New Yorkers.

The Scale of Hidden Automation

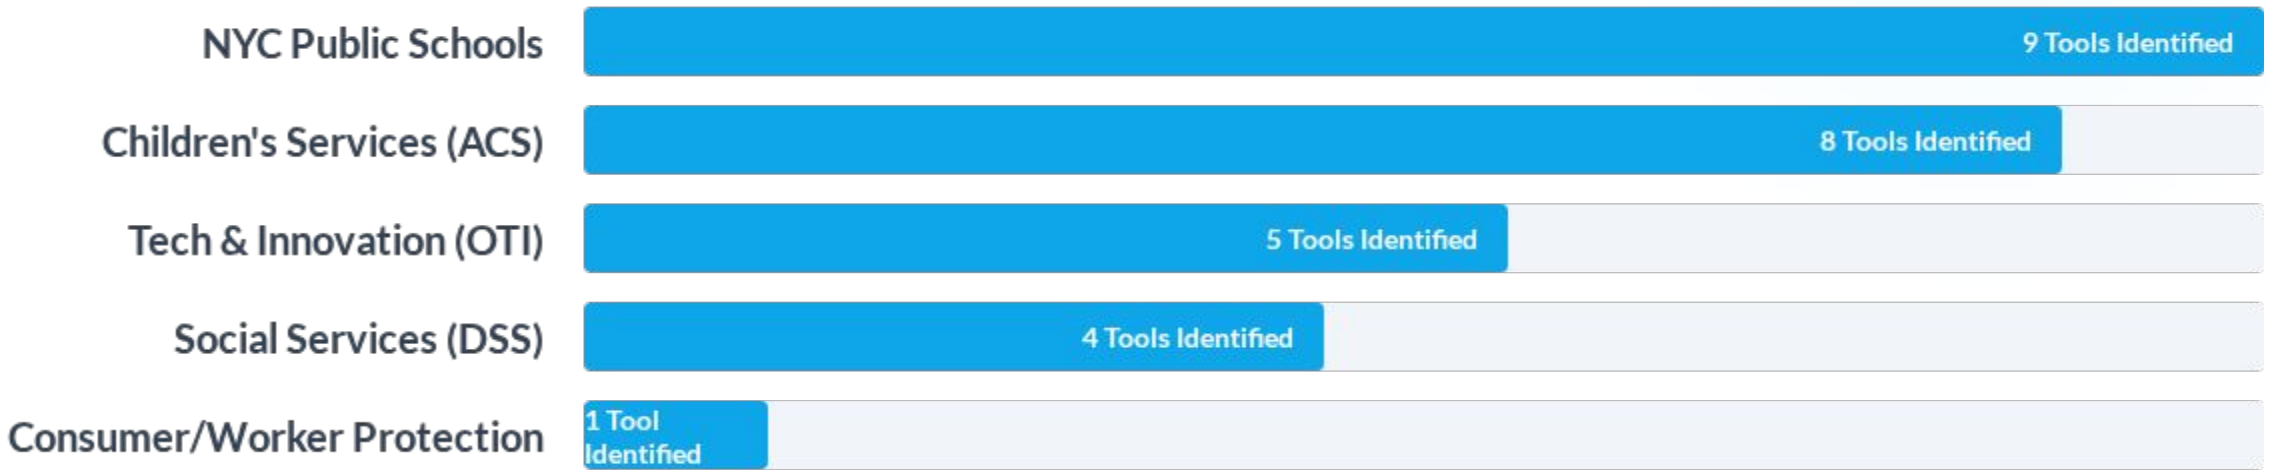
42+ Systems

New York City agencies utilize high-impact algorithmic tools to score, sort, and decide outcomes for housing, school matches, and welfare benefits.

Opacity by Design

While mandated reports exist under Local Law 35, they are dense, technical PDFs buried in agency archives, inaccessible to the citizens they affect.

Concentration of Algorithmic Impact



ACS and NYC Public Schools represent 70% of high-stakes automation affecting New York families.

Active High-Impact Algorithmic Tool Registry

Agency	Tool Name	Target Population	Core User Right
ACS	Repeat Maltreatment (RM) Model	Families/Individuals	Right to legal representation
NYC Public Schools	MySchools - Match	Individuals	Right to appeal placement
DSS	Homebase RAQ	Individuals	Right to 'Fair Hearing'
OTI	MyCity Chatbot	Individuals/Businesses	Right to human review (LL35)
DCWP	Route Automation	Businesses	Right to 14-day 'Cure Period'

Local Law 35

A promise of transparency, unfulfilled.

New York's pioneering legislation was meant to provide a "right to know." However, the gap between institutional disclosure and individual understanding is wider than ever. Equalize NYC translates institutional legalese into actionable individual rights.

THE SOLUTION

Empowering Citizens with Immediate Insight and Recourse.

Our Proprietary Process/The Equalize NYC Solution

Capture

User snaps a photo of any official city notice received in the mail.

Map

Our engine cross-references the agency letterhead with LL35 reports.

Demystify

Explains the AI logic in the user's native language immediately.

Appeal

Generates the legal request for a human review conference based on LL35 rights..

The Technical Engine

Bridging Logic and Law

Our backend consists of a cleaned JSON database of NYC's algorithmic compliance documents. We map 42+ complex tools to 12 core legal advocacy rules.

This allows us to provide sub-second detection and personalized action plans for families navigating city bureaucracy.

Case Study: ACS RM Model

Reclaiming Due Process

The "Repeat Maltreatment" model scores families based on historical data. Many families are never notified of their scores. Equalize NYC identifies when this scoring is applied, demystifies the risk factors, and ensures the family has a seat at the human conference table.

Impact Projection: Transparency Access

Our goal is to eliminate the knowledge gap for all 8.5 million New Yorkers by 2027.

Strategic Roadmap

Q1 2026

Hackathon Prototype & Initial Database Mapping.

Q2 2026

Advocacy Partnership with NYC Legal Aid Societies.

Q4 2026

Borough-wide rollout across the five boroughs.

2027+

Global Model for Municipal AI Accountability.
